

ATR360 / ATR240 Clocks

Innovative Top-Loading Clocks

- Bright, easy-to-read backlit digital display
- Supports weekly and monthly pay periods.
- Two-color printing
- Automatic Daylight Saving Time adjustments
- Internal chime to signal shifts and breaks
- ATR360 includes biometric verification and proximity reader for added peace of mind
- Support for external signal control (requires relay box, sold separately).
- Automatic Daylight Saving Time adjustments.
- Optional battery pack allows employees to clock in and out even during a power outage.
- Requires the use of ATR241 time cards

Each year, “buddy punching” costs employers thousands of dollars.

Buddy punching, or “time theft,” occurs when one employee clocks in or out for another who is not present. The result: absent employees get *paid* for time they are *not working*. A 2008 Nucleus Research study revealed at least 19% of employees admit to participating in the practice.

Biometric verification can virtually eliminate buddy punching, but has traditionally only been available on computer-based time tracking systems.

Now, the innovative ATR360 time clock allows employers who prefer to use traditional time cards to enjoy the **money-saving benefits** of biometric verification, all with one self-contained time clock. There is **no PC required** and **no software to install**.

If you prefer, the ATR360 also includes a proximity reader that allows the use of either proximity badges or convenient key fobs to identify employees. This can also go a long way toward eliminating buddy punching. Once the employee's badge or key fob has been read and accepted, the time will be printed on their timecard.

Upgrade your time tracking to the ATR360 today and enjoy the peace of mind offered by reliable biometric and proximity technology.
